

BATOR AUTOMATIC DOORS – ENCLOSED PARKING APPLICATIONS

Rapid operating speeds, reliable with minimum maintenance requirements.

Versatile application – securing & protecting property.

Timeless elegance, adapting to aesthetics of proximity.

DIVERSITY

BATOR doors adapt to the aesthetics of the property; providing a timeless elegance and a sophisticated finish to any parking structure. BATOR offers a variety of applications, including sliding folding & horizontal sectional doors, to meet the demands of any given situation. BATOR doors are available in both standard and certified intrusion-resistant variances.

OPERATION

BATOR offers a wide range of door control, including: remote control, key switch, push button, timer, or radar. BATOR provides sophisticated identification and opening devices, which may be used individually or in combination, e.g. sally ports.

DRIVE SYSTEM

BATOR offers versatile motorization options which have been tried and tested to function in the most demanding environments providing robust operations and requiring limited maintenance. BATOR doors running for many years guaranteed trouble-free. BATOR doors come in electric hydro-pneumatic and manual configurations.

MAN'S DOOR

BATOR doors can be equipped with an optional man's door for pedestrians. The man's door can be controlled via integrated door closer, anti-panic lock, or motor lock providing the user full control.

FINISH

BATOR's standard includes a powder-coated finish in any color (i.e. Sherwin Williams, Benjamin Moore, RAL, etc.) with an option for a pre-treated hot-dip galvanized frame in more corrosive environments.

DESIGN

Frames consist of a shielded arc welded BATOR profiles complete with welded hinges guaranteeing smooth operational movement – With relatively low maintenance requirements, BATOR doors will remain operational and cosmetically appealing for decades to come.

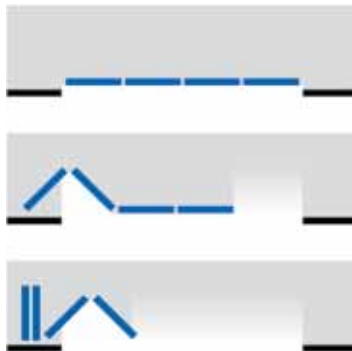

BATOR has doors to meet various design requirements: high thermal demands using insulated panels, air ventilation using perforated steel sheets, etc. Additionally, BATOR can match various integrated architectural design configurations using a variety of glazing, timber, steel and other architectural products.
